Consumption values were measured in normalized conditions in compliance with Standard IEC/EN 60 456. Consumption data in the home may vary with respect to the values in the table in relation to the water supply pressure and temperature, the load and the type of wash.

* The time indicated on the display can deviate from the values in the table, because it takes into account the operating conditions applicable at that time.

** To reduce the water temperature, some cold water is added at the end of the main wash cycle, before the pump drains the water out.

*** Reference Programme for Energy Label (with separator in detergent dispenser removed for use of powder detergent).

ADD DETERGENTS, CLOSE THE DOOR AND SELECT THE PROGRAMME

Add detergent as indicated on the front page and as described in the chapter "Detergent and Additives" in your Instructions for Use (remove separator in detergent dispenser for use of powder detergent if necessary).

1. Push the **"On/Off"** button. Wait until the light loop around the programme buttons has finished and only one programme button lights up. The **"Start (Pause)"** button light blinks.
2. Select the **desired programme** by touching the corresponding programme button. It is marked by a blue light. Or select a "special programme" by touching the "Special programmes" button on the display until the symbol of the desired programme lights up.
3. The **temperature** and **spin speed** indicated on the display can be altered by touching the "Temperature" button or the "Spin speed" button.

SELECT ANY DESIRED OPTION

If a combination of programme and/or options is not possible, the option light briefly blinks and and switches off again, and a signal sounds.

"Prewash" button
- Only for heavily soiled loads (for example sand, granular dirt). Increases the cycle time by approximately 15 min.
- Do not use liquid detergent for the main wash when activating the Prewash option.

"Eco" button
- With a modified temperature profile and an extended wash duration, the optimum combination of good wash result and lower energy consumption is achieved.

"Easy ironing" button
- Reduces creasing by an increased water quantity and a very gentle spin.

"Intensive rinse" button

"ADD GARMENT" INDICATION

Before starting a programme, the symbol lights to show that the door can be opened to add more washing. As soon as you press **"Start (Pause)"**, the door will lock until the end of the programme and must on no account be forced open. In case you have to open it urgently during a running programme, refer to "Reset a running programme before the end".

If you try to start a wash programme and the door is not properly closed, the "Add garment" indication will blink.

The "Door open" indication goes off, and the lit bubbles indicate that the programme is in process. In some phases, the remaining programme time is newly calculated - if this is the case, the "6th Sense" indication on the display will fade, and the remaining programme time is replaced by an animation.

CHILD LOCK

Activating the child lock prevents children from starting a wash cycle or changing the settings of a running programme. To activate the child lock:
- The washing machine has to be switched on.
- Touch the "Temperature" and the "Spin speed" buttons simultaneously for a few seconds until the key symbol on the display blinks - the key symbol will light afterwards to show that the child lock is active.

The programme setting cannot be changed anymore. The only change possible is to either reset the running programme by touching and holding "Reset/Drain" for a few seconds, or to switch the washing machine off by pushing **"On/Off"**.

To deactivate the child lock, proceed in the same way as for activating it.
